Is there a difference between Stochastic and Probabilistic ... They are used pretty interchangeably. Probabilistic is probably (pun intended) the wider concept. Stochastic describes a system whose changes in time are described by its past plus probabilities for successive changes. E.g., the price of a st. Introduction to Stochastic Processes - Lecture Notes Introduction to Stochastic Processes - Lecture Notes (with 33 illustrations) ... probability mass function (pmf) of the random variable X. What about the extended N 0-valued case? It is as simple because we can compute the probability $P[X=+1]$, if we know all the probabilities $p_i = P[X=i]$, $i \in \mathbb{N}$. Indeed, we use the fact that $P[X=0] + P[X=1] + P[X=2] + \dots = 1$; so that $P[X=1] = 1 - P[X=0] - P[X=2] - \dots$. Stochastic process - Wikipedia In probability theory and related fields, a stochastic or random process is a mathematical object usually defined as a collection of random variables. Historically, the random variables were associated with or indexed by a set of numbers, usually viewed as points in time, giving the interpretation of a stochastic process representing numerical values of some system randomly changing over time.

Stochastic - Wikipedia Etymology. The word stochastic in English was originally used as an adjective with the definition "pertaining to conjecturing", and stemming from a Greek word meaning "to aim at a mark, guess", and the Oxford English Dictionary gives the year 1662 as its earliest occurrence. In his work on probability *Ars Conjectandi*, originally published in Latin in 1713, Jakob Bernoulli used the phrase "Ars.
